Overview

MT20 is a graphical user interface (GUI) program that analyses the content of the log files of the Technician's Terminals.

This product allows the technicians to investigate incidents or signalling failures by replaying events recorded by the Technician's Terminal on a graphical trackside display.

The MT20 program is provided preloaded onto a curve screen PC for easier viewing. The log files of Mark 2 and the MT04 V2 Technician's Terminals onwards are compatible with this product.

Features

It can analyse log file contents for only one interlocking at a time

Display:

- Telegram changes
- Panel requests
- Faults
- Information messages
- Technician's controls

Filter the result of the analysis

- Telegram filtering
- Free text filtering

Replay telegram changes on a trackside display

- Play Forwards
- Pause
- Stop
- Single Step Forward
- Single Step Backwards

This program saves the results of an analysis in a text file for onward usage and a screenshot facility is supplied.
